

Just Green News

SUMMER EDITION

**JUST
BENEFICIAL INSECTS**

**JUST LIVE
BEE NEST**

**NEW FOR 2005 -
ORGANIC WINE**

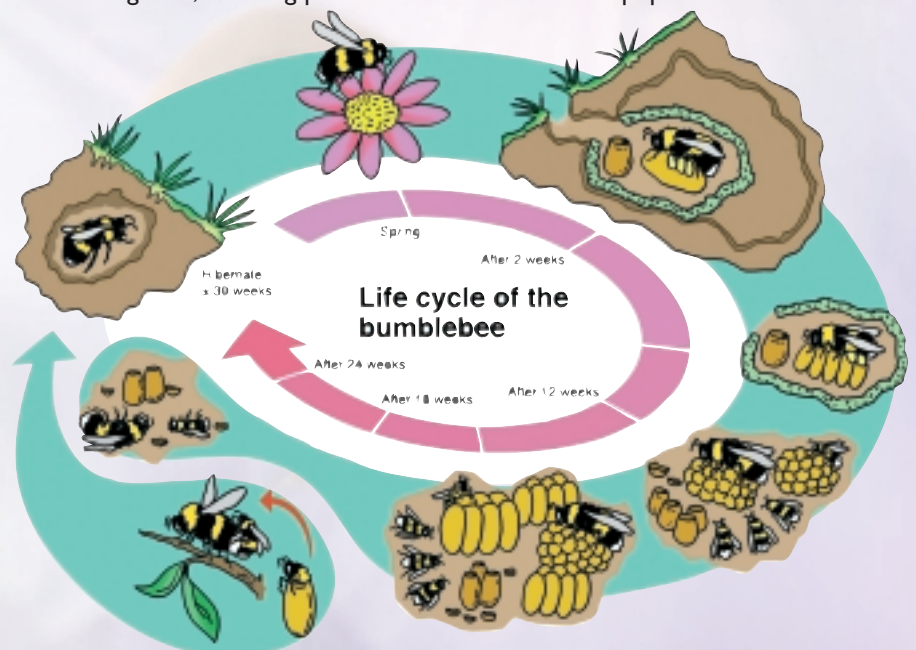

Mother nature is very active now in gardens with a variety of insects making their presence felt. JUST GREEN has a number of new beneficial insects that can be used to combat Ants, Aphids, Caterpillars and many more. The summer holidays are a good time to study insects, so why not try the JUST LADYBIRD or JUST BUTTERFLY PRODUCTION KITS? If wasps become a problem, make sure you have your JUST WASP TRAP in place to catch them.

JUST LIVE BEE NEST

If you want to guarantee that you have Bumble Bees in the garden for these plants, try the new JUST LIVE BEE NEST. Each hive is supplied with a Queen and 30-40 workers. The queen will continue to lay eggs for several months, watch the hive develop and the Bees come and go as they pollinate your garden and plants in the surrounding area, boosting pollination and the local Bee population.

just green

A number of less welcome insects will also be making an appearance in May and June. JUST GREEN can counter these pests with a number of new natural pest controls using beneficial insects.

JUST CATERPILLAR

The new product; JUST CATERPILLAR uses a species of nematode that can penetrate and kill damaging caterpillars. Unlike other nematode treatments, this one should be watered or sprayed onto the caterpillars on the plant. Within a few hours the nematodes will enter and start to kill the caterpillars and prevent them eating those precious edible or ornamental plants.

Another new product; JUST ANTS also uses nematodes in a different way. The nematodes in this product are watered into Ant mounds or colonies in lawns.

The nematodes irritate the ants and displace the ants from their colonies. This has proved to be an effective way of removing live Ant mounds from lawns.

BENEFICIAL INSECTS

Greenfly and Aphids start causing serious plant damage in May and June, not only eating growing tips and new plant growth but leaving sticky honeydew on the plant, which fungi often grows on. JUST GREEN has a large armoury of beneficial insects to attack these pests including Lacewings, Ladybirds, parasitic wasps and Hoverflies. Why not try our new summer pack of Ladybirds and Hoverflies? Ladybird larvae start eating large numbers of Greenfly/Aphids straight away and when they start pupating into adults, the Hoverfly larvae will mop up any survivors!

While all this insect action is going on in the garden, why not sit back and relax with JUST ORGANIC WINE?

One of the countries best organic wine suppliers is working in co-operation with JUST GREEN to offer you a wide variety of organic wines, free from chemical additives and grown without the use of pesticides, see the JUST GREEN website homepage or on-line shop for more details.

JUST GREEN returned to the Chelsea flower show at the end of May displaying a wide variety of new products and live insects, Thank you to all those who attended. For those who weren't able to visit us go to www.just-green.com where our on-line team of experts can help or advise you on natural pest control and creating biodiversity in your garden.
